Computer Science 2 Project	Team Members:	Ong, Sofia Jullian
Group Progress Report		Sible, Shantelle Dame
3rd Quarter		

Week 1-2 --> March 2-13, 2026

GOAL State your goal for the Week	DATA COLLECTED State/list the data collected relevant to your project	PROGRESS State the progress you have made so far by the end of the week
To create the basic structure of the Todoist Daily Planner.	- HTML structure for multi-step planner	- Built the initial layout and multi-step navigation
	- Basic CSS styling for layout and design	- Added input fields and buttons
		- Implemented basic styling for a clean interface

STRENGTH

- Organized layout and clear step-by-step flow
- Functional input system

code:

index.html styles.css script.js 44k5nxrfw

```html
<div id="step1" class="step active">
    <label>Starting Date:</label>
    <input type="date" id="startDate">

    <label>Your Name:</label>
    <input type="text" id="userName">

    <button onclick="goToStep(2)">Next</button>
</div>
```

result:

Starting Date: mm/dd/yyyy Your Name:

Next

AREAS FOR DEVELOPMENT

- No data saving yet
- Limited interactivity

STRATEGY FOR SUCCESS

- Learn JavaScript fundamentals
- Add functionality to handle user data

Computer Science 2 Project	Team Members:	Ong, Sofia Jullian

3rd Quarter		

Week 3-4 --> March 16-27, 2026

GOAL State your goal for the Week	DATA COLLECTED State/list the data collected relevant to your project	PROGRESS State the progress you have made so far by the end of the week
To make the planner functional by handling and storing user data.	- JavaScript functions for navigation and input handling	- Implemented localStorage to save and load data
	- LocalStorage for saving user data	-Added functions like goToStep(), addItem(), and showSummary()
		- Enabled dynamic display of events and tasks

index.html styles.css script.js 44k5nxrfw

```
let data = {
    name: "",
    date: "",
    mood: "3",
    events: [],
    tasks: []
};

function saveToStorage() {
    localStorage.setItem("todoist_daily_planner", JSON.stringify(data));
}

function loadFromStorage() {
    const saved = localStorage.getItem("todoist_daily_planner");
    if (saved) data = JSON.parse(saved);
}
```

index.html styles.css script.js 44k5nxrfw

```
function addItem(type) {
    if (type === "event") {
        data.events.push(name + " at " + time);
    } else {
        data.tasks.push(name + " (" + time + ")");
    }
}
```

STRENGTH
- Functional planner with persistent data
- Improved user experience

AREAS FOR DEVELOPMENT
- Still lacks advanced features
- No real-time interaction

STRATEGY FOR SUCCESS
- Explore JavaScript events and timing functions
- Plan feature upgrades

Computer Science 2 Project	Team Members:	Ong, Sofia Jullian
Group Progress Report		Sible, Shantelle Dame
3rd Quarter		

Week 5-6 --> March 30 -31, 2026

GOAL State your goal for the Week	DATA COLLECTED State/list the data collected relevant to your project	PROGRESS State the progress you have made so far by the end of the week
To enhance the planner with interactive and time-based features.	- Time input data (event time, task duration)	- Added countdown timers for tasks and events
	- JavaScript timing methods (setTimeout, setInterval)	- Integrated a sort of alarm system
		- Displayed real-time countdown on screen
		- Improved task input (minutes format)

STRENGTH

- Has good interactive features
- Better productivity support

index.html styles.css script.js 44k5nxrfw

```
function createCountdown(minutes, label) {
    let timeLeft = Math.floor(minutes * 60);

    const interval = setInterval(() => {
        timeLeft--;

        if (timeLeft <= 0) {
            clearInterval(interval);
            triggerAlarm(label);
        }
    }, 1000);
}
```

AREAS FOR DEVELOPMENT

- Minor bugs
- Timers reset on refresh
- The alarm only works when the app is open

index.html styles.css script.js 44k5nckxv

```
function triggerAlarm(label) {
    alert("Time's up for: " + label);

    if (Notification.permission === "granted") {
        new Notification("Time's up for: " + label);
    }
}
```

STRATEGY FOR SUCCESS

- Debug code and fix syntax issues
- Improve timer persistence

Computer Science 2 Project	Team Members:	Ong, Sofia Jullian

3rd Quarter		

Week 7 --> April 6-7, 2026

GOAL State your goal for the Week	DATA COLLECTED State/list the data collected relevant to your project	PROGRESS State the progress you have made so far by the end of the week
To finalize and refine the planner for better usability and performance.	- User feedback and testing results	- Refined timer display section
To research more on how to fix the code to the remarks	- Observed issues and UI improvements	- Improved layout
		- Enhanced validation for inputs
		- Cleaned and organized code

STRENGTH		
- Combines storage, interaction, and alerts		

AREAS FOR DEVELOPMENT		
- Add advanced controls		
- Improve design responsiveness		
- The alarm really won't make a sound if the tab is not opened.		

STRATEGY FOR SUCCESS		
- Add more advanced features gradually		
- Perform continuous testing and debugging
